1. 14.1 in Campbell and Norman.

   (a) What is net primary production?
   (b) What does NDVI stand for, and what is it?
   (c) In what regions of the world does the production of plants lag behind human consumption?
   (d) Create a scenario in which climate change would disrupt the transportation of plant material from regions of the world where plant productivity is high compared to human consumption, to regions where human consumption outweighs plant productivity.
