The course grade will be tentatively based 1/3 on the homework, 1/3 on the midterm, and 1/3 on a term paper (due at the end of the semester). Suggested term paper topics are listed on the website.

Most homework problems are MATLAB-based so it is essential you become comfortable in working with this package. MATLAB is available campus-wide.

For off-campus students, there is approximately a two week grace period for all assignments except that the term paper must be submitted before the end of finals week.
