To use the system:

1. Open the primary valve and stop when you see the pressure gauge move.
2. Do not change the valve that says "DO NOT CHANGE." This is the second pressure valve and should have a very low reading on the second pressure gauge. This is for your safety.
3. Open the black handle with yellow tape. You may open this valve to the maximum setting.
4. Adjust the flowmeter inside the chemical hood to the desired flowrate.
5. Adjust the knob for the number of needles you need.

To shut off the system:

1. Close the primary valve all the way.
2. Close the black valve with yellow tape all the way.
3. Close the flowmeter all the way.
4. Close the needle knob all the way.
