

## STAT 480, Homework 1, Spring 2003

You are to work on this assignment individually.

1. Attached is a blank STAT 101 Student Questionnaire. Develop a coding form for this questionnaire. There will be 120 questionnaires coming in and each should be identified uniquely. On the blank questionnaire itself indicate the columns you will use to record a unique 3 digit ID number and the data for each of the questions. If the response to the question is a number, be sure to leave enough spaces to accommodate a reasonable response. If the response to the question is not a number, indicate what numbers you will use to identify each answer. Also indicate what numbers you will use to indicate an omitted or unintelligible answer. Age should be recorded as whole number of years. Height should be reported to the nearest centimeter.
2. The first three completed questionnaires are attached. On each of the questionnaires use a colored pencil to mark the form for data entry using the template you developed above.
3. In the space below, give the first three lines of data for the three completed questionnaires.
