Due to the lack of time and me taking too long over the first three lectures, I have decided not to cover tissues (epithelium and connective) in class. We will cover muscle & nerve tissue later in the semester.  
Please refer to the notes posted for Wednesday September 4 to get an idea of the key words so that you know what to concentrate on when reading chapter 4.  
Table 4.1 a-j and table 4.3 a-i are very helpful. The figures will give you an idea of what these cells look like and where they are found.  
Use the study outline on pages 95-96.  
If you can answer the questions in the self quiz on pages 97-98 (except #’s 3, 9,16 19) you will be fine.  
Use the CD ROM in your book to quiz yourself.
